QUALITY ENGINEERING PRACTICE

Test Tooling

Context

RUN

Many of our current systems have been around a long time. Bespoke, legacy technology. Typically feed and watering to maintain our operations.

GROW

Minimal change to legacy systems to continue to support our business demands. Continuous Improvement etc.

TRANSFORM

Replace legacy systems by building for our future to deliver to our Strategic goals.

We are just starting in the Quality Engineering journey. We currently focus on delivering testing services but are now wanting to lean more “left” towards monitoring and evaluating the software development process to ensure that quality standards are met.

Manual Testing
