

AQA Testing Tool

With the AQA Accessibility Testing Tool, your team can find, fix, test and report on accessibility faster and with less overhead.

Our Approach to Digital Accessibility

At TTC, we believe the digital world will become more accessible and usable. We remain committed to bringing that vision to fruition by guiding and supporting organisations on their digital accessibility journeys. In our unique position, we factor accessibility into our scoping and briefing conversations with our clients. We assist our clients to develop an accessibility mindset that crosses the full Software Development Lifecycle (SDLC). This means shifting accessibility left and gaining benefits in cost reductions and usability improvements for all. Through defined strategies, frameworks, testing, and a deep understanding of accessibility best practices, we enable organisations to transform the way they deliver technology, ultimately helping to provide access to digital environments for everyone.

WITH AQA YOU CAN

Conduct Manual & Automated Testing

AQA flags all accessibility issues, not just the easy automated ones. It shows how a page and content will interact with a screen reader and keyboard, which reduces the need for external audits.

Real Time Dashboards & Reporting

Monitor your entire digital landscape and testing activity in real time. Track your maturity over time.

Test User Journeys

AQA tests single pages, scans in an intelligent way but can also test end-to-end-user flows. AQA can interact with complex functionality in single page applications, forms, drop down lists and menus.

Find Solutions Faster

Capture all code (not screen shots) and reduce duplicate and false positives, so your teams can review together easily without needing to replicate issues.

Robust API & Integrations

Integrate accessibility testing into your release lifecycle with AQA's API. Integrate with popular technologies such as JIRA, Jenkins, Sitecore and more.

Track Progress Over Time

AQA helps you compare and document accessibility testing results and progress over time.

Manage All in One Place

No need to use lots of tools and combine results into multiple spreadsheets. With AQA, manage accessibility all in one place.

Automate Screen Reader Testing

Testing with Assistive Technology is critical. We've made it fast and simple through guided automation and reporting.

Facilitate User Testing

Improve accessibility and usability with feedback from people with disabilities. AQA has been designed with and by people with disability.

CLIENT TESTIMONIALS

"This is the best accessibility testing reporting I have ever seen."

- Australian Federal Government Department

"It's simple and easy for teams to use. The quantity and quality of the tests is very detailed, the quality of the reporting is incredible compared to other tools (as well as access to past reports) and the ability to provide support and training is solid."

- Major Insurance company in Australia and New Zealand

About TTC

TTC is the leading global software assurance provider focused on helping organisations transform the way they deliver technology. Our unique capabilities across a wide range of delivery areas enable our clients to increase the speed and quality of technology development while reducing risk and cost. TTC was founded in 2004 to be a testing partner that could take global learnings and best practices and deliver them in a locally appropriate way. Fast forward eighteen years with offices in New Zealand, Australia, Asia, Americas, Middle East and Europe and strong partnerships with some of the world's largest organisations, this is still TTC's purpose today.
