

Digital Accessibility

TTC guides and supports organisations to transform the way they deliver technology, providing them with a competitive edge and helping to provide access to digital environments for all.

Our Approach to Digital Accessibility

At TTC, we believe the digital world will become more accessible and usable. We remain committed to bringing that vision to fruition by guiding and supporting organisations on their digital accessibility journeys. In our unique position, we factor accessibility into our scoping and briefing conversations with our clients. We assist our clients to develop an accessibility mindset that crosses the full Software Development Lifecycle (SDLC). This means shifting accessibility left and gaining benefits in cost reductions and usability improvements for all. Through defined strategies, frameworks, testing, and a deep understanding of accessibility best practices, we enable organisations to transform the way they deliver technology, ultimately helping to provide access to digital environments for everyone.

HOW WE SUPPORT ORGANISATIONS

Embedding Digital Accessibility

Our goal at TTC is to enable teams to embed digital accessibility practices into their day-to-day processes. We aim to do this through:

Strategic Guidance

Guiding organisations to create strategies, roadmaps and frameworks.

Learning & Development

Upskilling teams across business through technical and lived experience training and coaching.

Tooling

Providing best in market accessibility testing tooling designed with and by people with disability.

Tailoring

Providing implementation solutions that align to your organisation's culture and programs. Together we embed accessibility into your delivery methodology whether it be Waterfall, Iterative Waterfall or Agile.

Consulting

Consulting into organisations and supporting teams across business, including design, development and testing teams.

Manage Accessibility for You

We understand that organisations need support on their digital accessibility journey. We are here to help at any stage of that journey through:

Digital Accessibility Monitoring

Digital accessibility must be maintained. This monitoring service means that your website is regularly reviewed by people with disability, in addition to automated testing, to ensure accessibility is maintained. Periodical reporting and support are provided. Your organisation will receive a badge of compliance to showcase on your website.

Audit Assessments

Understanding a person's pathway and interaction through a website or system, also called the user journey, is important. At TTC, we test against the Web Content Accessibility Guidelines (WCAG) and we test the user journey to ensure an accessible user experience.

Audit assessments include summary and full technical reporting tailored to diverse needs of different stakeholders, classification and prioritisation of defects, de-briefing with stakeholders and the option for TTC to support with remediation.

Client Testimonials

The Australian Federal Government Department says, "This is the best accessibility testing reporting I have ever seen." while a leading Insurance company said, "It has been a pleasure working with the TTC team!"
